* The 9099 Relief Step is a onetime use device. Once it has been activated, it must be replaced with a new unit.

The Miller 9099 Relief Step is designed to relieve suspension trauma after a fall arrest. OSHA states that suspension trauma can occur within minutes after a fall, while waiting for rescue. The average fall rescue time is 15 minutes. The Relief Step provides support and helps blood circulation until rescue. Small and lightweight, the Relief Step attaches to any brand/style full-body harness.
